methods, Electrodes, Powder metallurgy.

The electrolytic method of obtaining metallic powders
for use in powder metallurgy is discussed. The metals
investigated were copper, tin and zinc, and the studies
carried out refer to operations on a laboratory scale.
For each of these metals are discussed in detail the
electrolyte and the operating conditions used in the
electrolyses. (Author)

Trans. of Kunststoffe (West Germany) 1957, v. 47
[no. 8] p. 521-524.DESCRIPTORS: *Plastics, *Bonding, Amides,
Urethanes, Polymers.

It is shown how and within what limits it is possible to get usable adhesive bonds with polyamides and polyurethanes. Methods are discussed for making polyfluorocarbons adherable. Likewise the possibilities with silicone-rubber are treated. Finally the bonding of polycarbonates and of terephthalic acid polyesters, and of polyisobutylene and of tempered plastics are mentioned and several problems of bonding different plastics with each other and with other materials are touched on. THE LANDSLIDE AT TJELLE 200 YEARS AGO
(Fjellskrete ved Tjelle; et 200-Års Minne) tr. by
Mrs. Liv Stueland. [1960] 5p. (3 figs. omitted).
Available on loan from U. S. Geological Survey Library,
Rm. 1033, GSA Bldg., Washington, 25, D. C.

Trans. of Naturen (Norway) 1956, v. 80, no. 6,
p. 323-333.

A review of a contemporary account of the landslide by
Gerhard Schjøning (Journey through a part of Norway in
the years 1773, 1774, 1775...) in the light of current
geological knowledge shows that effective protection
against such huge landslides (approximately 12 million
cubic meters) is almost impossible. But vertical
longitudinal cracks almost always open some time be-
fore a slide starts and warn that it is impending.

(Earth Sciences--Geology, TT, v. 5, no. 4)
